

# New Consciousness and the Future of Humanity

Humanity stands on the edge of a New Consciousness... a different way of experiencing who we are and how we fit into the universe. Nothing need change in the outside world for this to happen... only how we view ourselves and our relationship to that world must change. It will be as big a step as when animal mind evolved into human mind or we realized the sun didn't revolve around Earth.

Outwardly, New Consciousness will bring together science and religion, validating many of the world's spiritual traditions while creating a scientific platform that explains and offers reproducible proof of the creation of the universe and the evolution of life on Earth. It permits astronomers to penetrate event horizons, allowing study of black holes, explains the wave/particle paradoxes of quantum physics, and is consistent with Einstein's equation...  $E=mc^2$ .

Inwardly, New Consciousness will change what we mean when we say "I am...". We will know we are not our body, nor even our ideas, thoughts, or emotions, but the universal and eternal consciousness we experience at our very core as... 'I'. Knowing we are all aspects of the same conscious Oneness will change humanity's understanding of what is important. We will use our individual skills, talents, and abilities not just for our own personal enrichment, but for the good of all. And when enough of us realize and live New Consciousness it will usher in an era of peace and understanding on Earth.

However, at our current level of evolution, this next step is voluntary. If we don't evolve from here... if humanity chooses not to take this major step, or is not aware it even exists... we will destroy ourselves and, most likely, Earth as well. We will become just another black hole in the universe.

Phenomenology is the study of experiential consciousness and I am a phenomenologist with forty years of study behind me. I have been given the ability and resources not only to know New Consciousness as an individual, but to develop writings, games, trainings, and methods whereby others can quickly experience what it took me half a lifetime to know.

I seek a partner who feels humanity is worth saving and who has the ability and resources to help these teachings be shared. If we do it right, we will change life on Earth.

peace.....ag
